A;Title: Conserved sequences flank variable tandem repeats in two S-antigen gnes of Plas
A;Reference number: A90863; MUID:85176931
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ŗ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   C.G.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A; Wolecule type: DNA
A; Residues: 1-309 < COM>
A; Experimental source: clone NF7.S
A; Note: the intact NF7 S-antigen contains about 35 more of the 8-residue repeats
A; Note: the intact NF7 S-antigen contains about 35 more of the 8-residue repeats
C; Comment: The S-antigen is secreted by the parasite.
C; Superfamily: plasmodlum S-antigen
C; Superfamily: plasmodlum S-antigen; tandem repeat
C; Superfamily: signal sequence #status predicted < SIG>
F; 1-23/Domain: signal sequence #status predicted < CIG>
F; 24-309/Product: S-antigen #status predicted < CMT>
F; 27-256/Region: 8-residue repeats (S-D-E-A-E-A-L/R-K)
F; 257-271, 272-286/Region: 15-residue repeats
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5

C. Species: Petromyzon marinus (sea lamprey)
C. Date: 13-Sep-1996 #sequence_revision 13-Sep-1996 #text_change 21-Jul-2000
R. Jacobs, A. J.; Kamholz, J.; Selzer, M.E.
Brain Res. Mol. Brain Res. 29, 43-52, 1995
A. Title: The single lamprey neurofilament subunit (NF-180) lacks multiphosphorylation
A. Reference number: 151116
A. Status: preliminary; translated from GB/EMBL/DDBJ
A. Molecule type: mRM
A. Molecule type: mRM
A. Residues: 1-1110 c.JAC>
A. Residues: 1-1110 c.JAC>
